SLR Centre for Global Law, Geoeconomics & Emerging Technologies

Centre Profile

About Us

The Centre rigorously examines the profound transformations underway in global power structures, regulatory frameworks, capital flows, energy systems and technological innovation, assessing their impact on markets, institutions and the international order. It converts these complex developments into precise, actionable intelligence for businesses, governments and institutional stakeholders.

By convening distinguished leaders, subject-matter experts, policymakers and industry principals, the Centre fosters high-level dialogue, generates practical insights and identifies strategic opportunities for collaboration.

Situated at the nexus of law, geoeconomics, and emerging technologies, the Centre analyses how evolving configurations of power, capital, trade, energy, regulation, and technology are reshaping economies, industries, and institutions worldwide. By integrating multidisciplinary research and applied intelligence, it equips businesses, governments, investors, and institutions to anticipate emerging risks, discern opportunities, and navigate an increasingly intricate global landscape with clarity and confidence.

AREAS OF FOCUS

01 — Global Law & Cross-Border Regulation

The Centre analyses the evolving legal and regulatory architecture that governs international commerce, investment, technology and cross-border activity. Its work encompasses international economic law, trade and investment regimes, sanctions and economic restrictive measures, digital regulation, cross-border transactions, comparative regulatory approaches and emerging frameworks. Through this lens, the Centre assesses how regulatory shifts reshape international markets and equips businesses to navigate an increasingly complex and fragmented jurisdictional landscape.

02 — Geoeconomics & Strategic Affairs

Economic and geopolitical power are ever more tightly interwoven. The Centre examines the strategic deployment of trade, investment, finance, technology, resources and economic policy as instruments of statecraft and international influence. Research focuses on global power realignments, economic security, strategic autonomy, the roles of BRICS+, the G20, the Indo-Pacific and the Global South, supply-chain resilience, and the transforming architecture of international cooperation.

03 — Global Finance & Investment

Capital allocation is increasingly shaped by geopolitical risk, regulatory evolution and strategic competition. The Centre investigates the global financial architecture, investment flows, sovereign and institutional finance, development finance, economic restrictions, investment risk and the deepening nexus between finance and geopolitics. Its work illuminates how shifts in global capital influence markets, corporate strategy and investment decision-making.

04 — Energy & Energy Transitions

Energy has become a central determinant of economic performance, security, industrial competitiveness and geopolitical leverage. The Centre examines energy security, energy markets, critical minerals, energy transitions, climate-related regulation, transition finance and the reconfiguration of the global energy system. Research explores how evolving energy landscapes affect industrial competitiveness, supply chains, investment patterns and international relations.

05 — Emerging Technologies & Governance

Technology has emerged as a defining force in economic competitiveness and strategic power. The Centre analyses artificial intelligence, frontier technologies, digital economies, semiconductors, autonomous systems, cyber policy, technology governance and nascent regulatory frameworks. Beyond technological development itself, the Centre studies the broader implications of technological convergence for markets, institutions, security and the future of global governance.

PRIORITY SECTORS

The Centre applies its research to priority sectors in which geopolitical, regulatory, technological and economic forces increasingly converge and interact.

Defence & Homeland Security

Strategic technologies, defence regulation, security frameworks and the foundations of economic resilience.

Pharmaceuticals & Healthcare

Global health security, pharmaceutical regulation, supply-chain integrity, innovation pathways and market access.

Energy & Climate

Energy security, transition pathways, critical minerals, infrastructure development and climate-related investment.

Technology & AI

AI governance, digital regulation, semiconductors, cyber policy and the broader landscape of emerging technologies.

Financial Services

Global financial architecture, investment flows, fintech innovation, regulatory evolution and the geopolitics of finance.

Infrastructure & Connectivity

Trade corridors, logistics networks, digital infrastructure, investment frameworks and regional connectivity.

Electronics & Semiconductors

Technology supply chains, industrial policy, investment dynamics and strategic dependencies.

WHAT WE DO

Research

The Centre produces rigorous, evidence-based research that illuminates emerging global trends and their strategic implications. Its research portfolio encompasses flagship reports, global outlooks, policy papers, working papers, country studies, sector studies, comparative regulatory analysis, thematic inquiries and strategic briefs.

Intelligence

The Centre translates complex global developments into focused, decision-relevant intelligence. This work spans geopolitical intelligence, geoeconomic monitoring, regulatory intelligence, country risk assessment, market and sector intelligence, investment intelligence, emerging technology intelligence and strategic risk monitoring. The objective is to enable organisations to identify what is changing, understand why it matters, and anticipate where the consequences are most likely to materialise.

Strategic Advisory

The Centre supports organisations navigating complex and rapidly evolving international environments. Its advisory services include market-entry intelligence, geopolitical risk assessment, international expansion strategy, regulatory strategy, scenario planning, investment risk evaluation, policy strategy, stakeholder mapping, strategic foresight and cross-border intelligence. By integrating deep research with applied strategic analysis, the Centre equips decision-makers with the clarity required for better-informed choices.

OUR OFFERINGS

SLR Global develops research, intelligence and strategic engagement offerings designed to help organisations understand and respond to a rapidly changing global environment. Its work connects geopolitical developments, regulatory change, economic and financial shifts, energy

transitions and emerging technologies with their implications for business, investment, policy and institutional strategy.

Research & Strategic Intelligence

The Centre produces rigorous, decision-oriented research on the developments shaping global markets, institutions and the international order. Its research spans geopolitical and geoeconomic trends, cross-border regulation, international law, global finance and investment, energy security and transition, emerging technologies and AI governance. Through thematic studies, country and sector assessments, policy papers, outlooks and intelligence briefs, the Centre translates complex developments into clear strategic insights.

Geopolitical & Regulatory Intelligence

SLR Global monitors developments across jurisdictions to identify regulatory, geopolitical and economic shifts that may affect organisations, markets and investments. This intelligence work encompasses country and sector monitoring, regulatory developments, sanctions and economic restrictions, trade and investment measures, technology regulation, energy policy and other developments relevant to cross-border operations. The objective is to enable decision-makers to identify emerging risks and opportunities before they crystallise into operational challenges.

Executive & C-Suite Briefings

The Centre provides confidential briefings for CEOs, boards, senior executives and leadership teams on issues with material geopolitical, regulatory, economic or technological implications. These briefings are tailored to the organisation's strategic priorities and may address geopolitical developments, market-entry considerations, regulatory shifts, international relations, economic security, emerging technologies or sector-specific risks. Rather than simply conveying information, the briefings focus on what has changed, why it matters and what decision-makers should consider next.

Executive Preparation & Strategic Decision Support

SLR Global supports senior leaders preparing for consequential meetings, negotiations, international engagements, government interactions, investor discussions, diplomatic engagements and high-stakes strategic decisions. Support may include geopolitical and regulatory background notes, stakeholder profiles, country assessments, talking points, briefing books, anticipated questions, scenario analysis and decision frameworks. The objective is to ensure that executives enter critical engagements with the relevant context, risks, opportunities and strategic considerations clearly mapped.

Closed-Door Roundtables & Strategic Dialogues

The Centre convenes carefully curated roundtables that bring together policymakers, diplomats, business leaders, investors, academics, legal experts, technology leaders and other subject-matter specialists. These engagements are designed to facilitate candid discussion on emerging issues that require cross-sector and cross-border perspectives. Where appropriate, roundtables may be conducted under the Chatham House Rule, enabling participants to use the information received while protecting the identity and institutional affiliation of the speaker. This format encourages frank exchange, surfaces diverse perspectives and develops practical

understanding of complex issues. Selected discussions may inform subsequent research, policy analysis or strategic recommendations, subject to participant confidentiality and consent.

Policy & Stakeholder Engagement

SLR Global helps organisations understand and navigate the wider policy ecosystem surrounding their sectors and markets. Its work may include stakeholder mapping, policy landscape assessments, institutional analysis and preparation for engagements with governments, regulators, industry associations, diplomatic missions, international organisations and other relevant stakeholders. By integrating policy, regulatory, geopolitical and legal perspectives, the Centre enables organisations to approach institutional engagement with greater clarity and strategic preparedness.

Market Entry & International Expansion Intelligence

For organisations entering new jurisdictions or expanding internationally, the Centre provides research and intelligence on the political, regulatory, economic and strategic environment of prospective markets. Assessments may examine market conditions, regulatory frameworks, investment policies, geopolitical exposure, supply-chain considerations, strategic sectors, institutional stakeholders and emerging risks. This work supports market-entry decisions and complements legal, corporate and transaction advisory undertaken by SLR Advocates & Solicitors.

Geoeconomic & Investment Risk Advisory

The Centre examines how trade policy, sanctions, economic security measures, capital flows, energy dependencies, strategic industries and geopolitical competition are reshaping investment and commercial decisions. It supports organisations in assessing the broader environment surrounding investments, transactions and international expansion, helping decision-makers identify risks that may not be visible through conventional commercial or legal due diligence alone.

Scenario Planning & Strategic Foresight

SLR Global develops forward-looking assessments to help organisations prepare for multiple possible futures. Scenario exercises may examine geopolitical disruptions, regulatory changes, technological shifts, energy transitions, supply-chain vulnerabilities or transformations in the international economic order. These engagements are designed to strengthen organisational preparedness by identifying potential developments, testing assumptions and examining the strategic implications of alternative scenarios.

Bespoke Research & Advisory

The Centre undertakes commissioned research and strategic assignments tailored to the specific requirements of businesses, investors, governments, institutions and international organisations. Assignments may include country and sector studies, geopolitical risk assessments, regulatory landscape analysis, stakeholder mapping, policy impact studies, strategic reports and executive intelligence products. Each engagement is structured around the client's decision, question or strategic challenge rather than a standardised research format.

Knowledge Platforms, Conferences & Convening

Beyond commissioned work, SLR Global develops knowledge platforms that bring together expertise from law, policy, business, finance, diplomacy, academia and technology. Through conferences, executive dialogues, policy forums, masterclasses and specialised programmes, the Centre creates spaces for informed exchange and collaboration around emerging global issues.

WHO WE ENGAGE WITH

SLR Global works across the public and private sectors, engaging a diverse range of stakeholders whose decisions shape, and are shaped by, the evolving global environment.

Businesses & Multinational Corporations

Supporting organisations as they navigate international markets, regulatory change and geopolitical uncertainty with clarity and strategic foresight.

Investors & Financial Institutions

Providing targeted intelligence on markets, sectors, investment environments and emerging risks to inform capital allocation and portfolio strategy.

Governments & Public Institutions

Supporting policy research, comparative analysis and international engagement to strengthen evidence-based decision-making.

International Organisations

Contributing research and informed perspectives on global governance and the management of cross-border challenges.

Industry Associations

Developing sector-specific research, intelligence and policy insights that advance collective understanding and coordinated responses.

Universities & Research Institutions

Advancing collaborative research, knowledge exchange and academic dialogue on issues of shared strategic importance.

Diplomatic & International Networks

Creating carefully curated platforms for dialogue on emerging global and regional developments.

GEOGRAPHIES & STRATEGIC CORRIDORS

SLR Global adopts a global, cross-border perspective, with particular emphasis on the regions and economic corridors that are reshaping trade, investment, technology, energy security and

the evolving international order. Its geographic coverage is designed to examine developments not as isolated national events, but as interconnected shifts across markets, jurisdictions and strategic supply chains.

India & South Asia

India constitutes the Centre's principal geographic anchor. Research examines India's evolving role in global trade, investment, technology, energy, defence, pharmaceuticals and critical supply chains, together with its relationships with South Asian neighbours and major global partners. Analysis considers India's position as a market, manufacturing base, investment destination and emerging node within global value chains.

Indo-Pacific & East Asia

The Indo-Pacific remains a core area of focus given its centrality to global trade, maritime connectivity, technology, manufacturing and strategic competition. Coverage encompasses China, Japan, South Korea, Taiwan, the ASEAN economies, Australia and key Indo-Pacific partnerships, with particular attention to semiconductors, electronics, critical minerals, advanced manufacturing, maritime trade, technology ecosystems and China+1 strategies.

ASEAN & Southeast Asia

SLR Global tracks Southeast Asia as an increasingly significant destination for investment, manufacturing diversification and supply-chain restructuring. Research examines Singapore, Indonesia, Vietnam, Malaysia, Thailand, the Philippines and other ASEAN markets, including their roles in electronics, semiconductors, energy, logistics, digital infrastructure and emerging manufacturing networks.

Middle East & Gulf

The Gulf and wider Middle East are analysed as rising centres of capital, energy, logistics, infrastructure, technology and sovereign investment. Coverage includes the GCC economies and their expanding economic relationships with India, Asia, Europe and Africa, with particular attention to energy security, sovereign wealth, infrastructure, technology investment, trade corridors and new economic partnerships.

Europe & Eurasia

SLR Global monitors Europe and Eurasia through the interconnected lenses of regulation, trade, energy security, finance, technology and geopolitical risk. Coverage spans the European Union, the United Kingdom and key Eurasian markets, with attention to sanctions and economic restrictions, industrial policy, energy diversification, strategic technologies, investment regulation and evolving trade relationships.

North America

The United States and Canada are examined as major centres of global finance, technology, investment, defence, innovation and regulatory influence. Research focuses on developments

affecting international businesses and supply chains, including technology controls, investment screening, economic security, industrial policy, critical technologies, energy and strategic trade.

Africa

Africa is analysed through the lenses of resources, infrastructure, energy, critical minerals, emerging markets and new trade and investment relationships. Particular attention is given to countries and corridors relevant to India's economic engagement, global resource security, manufacturing diversification, infrastructure development and South–South cooperation.

Latin America & the Caribbean

SLR Global monitors Latin America and the Caribbean as emerging strategic partners in critical minerals, energy, agriculture, infrastructure, manufacturing and global trade. Research considers the region's evolving relationships with India, China, the United States, Europe and other major economic centres.

Global Supply Chains & Strategic Corridors

Geographic research is complemented by a supply-chain and strategic-corridor perspective. The Centre examines how geopolitical competition, regulation, investment patterns, infrastructure and technological change are reorganising the movement of goods, capital, energy, data and critical technologies across borders.

Strategic Corridors We Track

The Centre also examines the strategic importance of major trade, investment, energy and connectivity corridors, including:

India–Middle East–Europe — Trade, logistics, energy, investment and connectivity linking India with the Gulf and Europe.

India–Indo-Pacific — Manufacturing, technology, maritime connectivity, investment and supply-chain diversification across India and East/Southeast Asia.

China+1 Supply-Chain Networks — The relocation and diversification of manufacturing and sourcing away from concentrated dependence on China, particularly across India, ASEAN and other emerging manufacturing centres.

Gulf–India–Asia Energy & Investment Corridor — The movement of energy, capital, infrastructure investment and strategic partnerships between the Gulf, India and wider Asia.

Europe–Eurasia–Asia Connectivity — Trade, energy, infrastructure and economic-security developments connecting European and Asian markets.

Africa–Middle East–India Corridor — Emerging connections involving resources, critical minerals, energy, infrastructure, logistics, manufacturing and investment.

Americas–Europe–Indo-Pacific Strategic Supply Chains — The increasingly interconnected networks surrounding semiconductors, critical minerals, energy, advanced technology and strategic manufacturing.
